notes (Times enough)

It is enough to saddle up,
to promise myself I have already forgotten these kinds of decisions all along
serene without my witness
-
Not they know, no pushing buttons
no tired lines,
no missing my home
-
Instead I wished I could print you out
and put you down,
and wring you out. And burn your mouth
-
Good to be safe,
with the lions,
with the broken branches, the bedrooms,
A knowing own, a oneness, your promise, that you won't tell me.

notes (Misshapen you love me)

unable alone unable beside you,
Laughing Laughing Laughing
My steel legs
My steel heart
trapped in time, that solid morning
i learned about alone and there i was...
my little felt heart, for you, beating down on,
those like us.
We will be honest the few of us left standing
That nothing really does change
That nobody is capable
That I want the same as I have always wanted
without destroying myself or anyone else
All said,
Misshapen you love me

notes

the sun shines in awkward portions
into dark spaces perfected by time and willingness
The perfections crack in oh so synchronized movements -
Days in a row of this chartable progress
My stained glass window, protected by the warmih
of the sun and the honest eyes of those who dare to peer in
No more pry

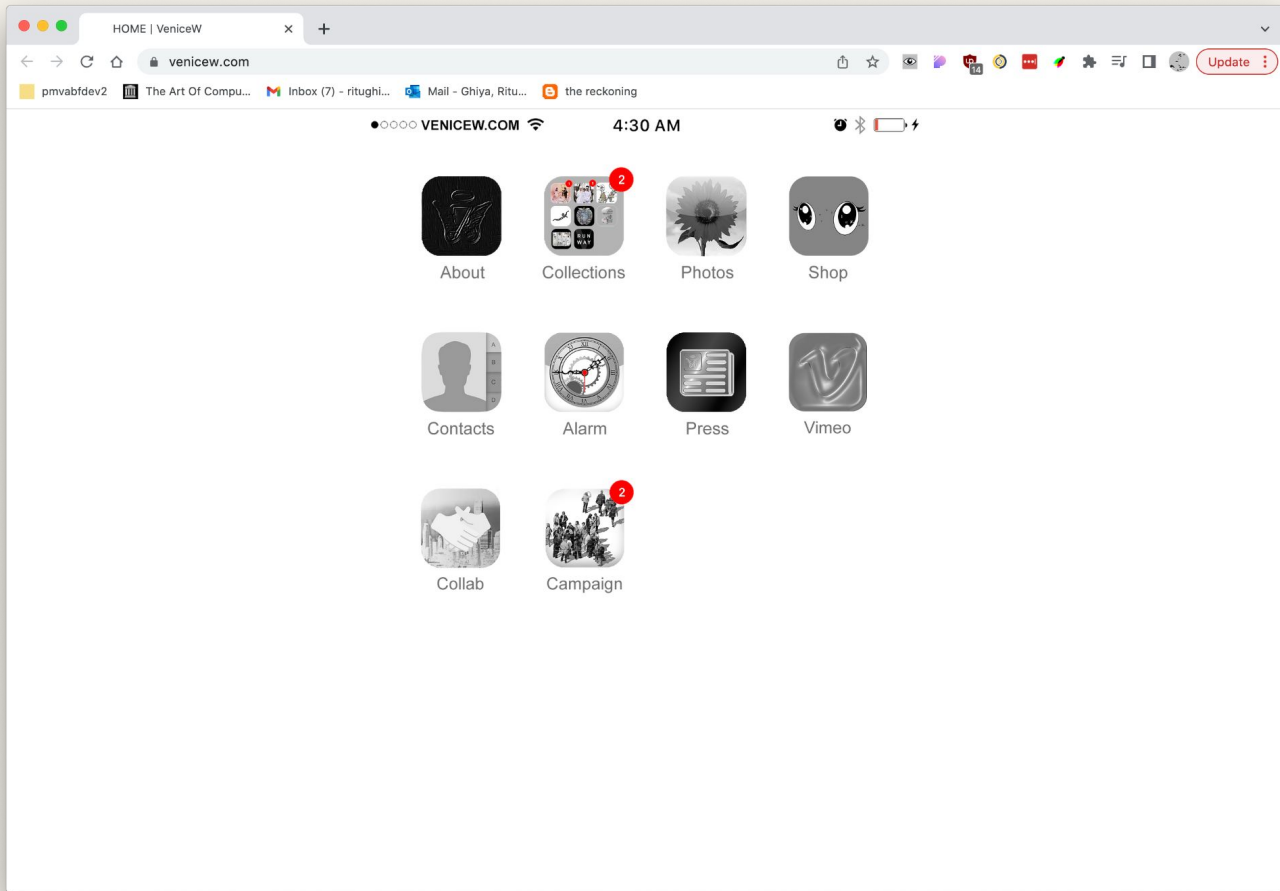

aug 29 2021
aug 29 2021 +

notes (I won't lie this time,)

This time you trashed me trashed me
What is the point of my big brains you can use me for your gain and I have to think like a machine faster and faster and faster
Outpacing the computer
Outpacing the laws of life and love and not much else
I trashed me too I have a lot to talk about when I look backwards.
I see ice.

peer-to-peer

Peer-to-peer (P2P) computing or networking is a distributed application architecture that partitions tasks or workloads between peers. Peers are equally privileged, equipotent participants in the application. They are said to form a peer-to-peer network of nodes.

Image-to-Image Demo

Interactive Image Translation with pix2pix-tensorflow
Written by Christopher Hesse — February 19th 2017

Recently, I made a [Tensorflow port of pix2pix by Isola et al.](#), covered in the article [Image-to-Image Translation in Tensorflow](#). I've taken a few pre-trained models and made an interactive web thing for trying them out. Chrome is recommended.

The pix2pix model works by training on pairs of images such as building facade labels to building facades, and then attempts to generate the corresponding output image from any input image you give it. The idea is straight from the [pix2pix paper](#), which is a good read.
