

For the last half of this class, we will be turning the class into a studio lab. That is, we'll be using class time to *work* both alone & together on project(s).

P2: Design and build a project that embodies collage.

This project can be a continuation of your microproject or an entirely new idea. Think about your project + your creative process in relationship to different types of collage, including appropriation, sampling, bootlegging, pastiche, and remix.

Your project must incorporate a relationship between digital and physical space, i.e. a technological and physical element we'll experience the day of your crit, either 4/17 or 4/23.

Suggested theme is ... “Portal”

P2: Some Format Ideas

- + Website shared publicly on the internet maybe including a tool (a Chrome extension that prints something out every time you open a new tab)
- + A collection of websites with an meaningful viewing station
- + A website with a physical wearable bootleg or a physical mascot
- + A performance or a discussion and a digital presentation of your inspiration behind it
- +something else?!

P2: Tips...

- 1) Consider your project's presentation & what you'll need to produce to see the project through, always valuing your conceptual + visual aims
- 2) Commit to iterating and debugging; discover new techniques online you want to incorporate – *commit yourself to failing often + quickly*
- 3) “Be dramaturgic. Create a narrative and think of the sequence of how the information you want to convey is accessed. Always put yourself into the position of a ‘first user.’ How will they feel, navigate and interpret your website?” - designer Massimiliano Audretsch

P2: Inspiration

Skeumorphic Web Design
